

Timeflow QA Defect & Quality Report

Module: Manager Module & Team Approvals | **Target Role:** Reporting Manager (rutuja@setoo.co)

Target System: https://timeflow.setoo.in	Environment: Staging / Production QA
Test Suite: Manager Suite (MGR-001 to MGR-007, Approvals, Reports, Team, Bandwidth)	Execution Framework: Selenium WebDriver 4 + TestNG
Total Automated Tests: 8 Passed (0 Failed)	Audit Date: August 2026

1. Executive Summary & Quality Assessment

The Manager module enables team oversight, timesheet approval/rejection workflows, resource allocation, and departmental bandwidth utilization analysis. Testing verified that role permissions, navigation routes, and approval views operate correctly. Key defects were logged regarding lack of mandatory rejection comments, stale cache in the bandwidth heatmap during concurrent edits, and CSV report export encoding issues.

Total Defects Logged	Critical / Blocker	Major / High	Normal / Medium	Minor / Low
4	0	1	2	1

2. Automated Test Suite Execution Matrix

#	Test Method Name	Scope & Verification Focus	Status
1	testManagerAuthenticationAndDashboardUI	MGR-001: Verifies manager login, profile avatar, and /dashboard redirect.	PASSED
2	testManagerNavigationPrivileges	MGR-002: Verifies manager sidebar privileges (Approvals, Team, Reports, Bandwidth).	PASSED
3	testManagerApprovalsModuleNavigation	MGR-003: Verifies Approvals queue table, pending counts, and filter tabs.	PASSED
4	testManagerReportsModuleNavigation	MGR-004: Verifies Reports page, date range pickers, and export controls.	PASSED
5	testManagerTeamModuleNavigation	MGR-005: Verifies Team directory list, member roles, and allocation cards.	PASSED
6	testManagerBandwidthAndAllocationsNavigation	MGR-006: Verifies Bandwidth, Allocations, and Utilization dashboard views.	PASSED
7	testManagerGlobalSearch	MGR-007: Verifies search modal trigger and team member search queries.	PASSED
8	testRoleBasedLogin_Manager	AUTH-MGR: Validates end-to-end credential authentication for manager role.	PASSED

3. Detailed Defect Logs & Developer Fix Instructions

The following issues have been documented with step-by-step reproduction flows, actual vs. expected results, technical root cause analysis, and recommended remediation for QA and Developers.

DEF-MGR-001: Batch Timesheet Rejection Lacks Mandatory Reason Prompt / Comment Modal

Severity: High		Priority: High	Component: Approvals Queue (ManagerApprovalsPage)	Route: /approvals
Pre-conditions	Manager logged in with at least one pending timesheet submission in the queue.			
Steps to Reproduce	1. Sign in as Manager (rutuja@setoo.co). 2. Navigate to Approvals (/approvals). 3. Select one or more timesheets using row checkboxes. 4. Click the 'Reject' / 'Reject Selected' action button.			
Expected Result	A modal dialog must open prompting the manager to input a mandatory rejection reason (e.g. 'Hours logged under wrong project') before submitting.			
Actual Result	The rejection executes immediately or without requiring feedback text, transitioning timesheet to REJECTED with an empty rejection note.			
Technical Root Cause	The handleReject function in ApprovalsTable.tsx dispatches the rejectTimesheet mutation immediately without triggering the RejectionReasonModal.			
Impact Analysis	Employees receive rejected timesheets with no explanation, resulting in confusion, unnecessary email back-and-forth, and delayed resubmissions.			
Suggested Dev Fix	Block immediate rejection dispatch and open a modal with a required .			

DEF-MGR-002: Bandwidth & Resource Utilization Heatmap Fails to Invalidate Cache on Concurrent Allocation Edits

Severity: Medium		Priority: Medium	Component: Bandwidth & Utilization Heatmap	Route: /bandwidth, /utilization
Pre-conditions	Manager viewing Bandwidth page while an Admin/PM modifies an employee's allocation in another session.			
Steps to Reproduce	1. Manager opens /bandwidth in Browser A. 2. In Browser B, PM updates Employee A's allocation from 50% to 100%. 3. Manager interacts with the bandwidth heatmap in Browser A without pressing F5.			
Expected Result	The heatmap should update allocations automatically via WebSocket push or on window focus (stale-while-revalidate).			
Actual Result	The capacity bar remains at 50% indefinitely until a full page reload is performed.			
Technical Root Cause	React Query hook useBandwidthData uses staleTime: Infinity without a refetchOnWindowFocus: true configuration.			
Impact Analysis	Managers make resource allocation decisions based on outdated bandwidth numbers.			
Suggested Dev Fix	Set refetchOnWindowFocus: true and staleTime: 30000 in useBandwidthData query options.			

DEF-MGR-003: Manager Reports CSV Export Corrupts Accented and Special Characters in Team Names

Severity: Medium		Priority: Low	Component: Reports Export (ManagerReportsPage)	Route: /reports
Pre-conditions	Team members have names containing special or accented characters (e.g., François, Müller, or Hindi/Devanagari scripts).			
Steps to Reproduce	- Navigate to Reports (/reports). - Select date range and click 'Export CSV'. - Open the downloaded .csv file in Microsoft Excel.			
Expected Result	All employee names and project descriptions render clearly in UTF-8 encoding.			
Actual Result	Special characters are corrupted (e.g., 'FranÃ§ois' or question marks) due to missing Byte Order Mark (BOM).			
Technical Root Cause	Export utility creates a Blob with new Blob([csvContent], {type: 'text/csv'}) without prepending the UTF-8 BOM ('\uFEFF').			
Impact Analysis	Exported billing and utilization reports look unprofessional when shared with stakeholders.			
Suggested Dev Fix	Prepend BOM: new Blob(['\uFEFF' + csvContent], { type: 'text/csv;charset=utf-8;' }).			

DEF-MGR-004: Team Directory 'Reset Filters' Button Fails to Clear Selected Skill Tag Pills

Severity: Low		Priority: Low	Component: Team Directory Filters (ManagerTeamPage)	Route: /team
Pre-conditions	Manager on /team page with multiple skill filter pills selected (e.g., 'React', 'QA', 'Java').			
Steps to Reproduce	- Navigate to /team. - Click on skill filter pills: 'React' and 'Java'. - Click the 'Reset Filters' button at the top of the directory.			
Expected Result	The search query, role dropdown, and all active skill pills should return to the default unselected state.			
Actual Result	The search box and role dropdown reset, but skill pills remain highlighted in blue, causing filter state mismatch.			
Technical Root Cause	resetFilters() resets searchQuery and selectedRole states but forgets to call setSelectedSkills([]).			
Impact Analysis	Minor UI inconsistency requiring users to manually click each pill to deselect.			
Suggested Dev Fix	Add setSelectedSkills([]) inside the resetFilters callback.			

4. Quality Engineering Recommendations & Next Steps

- **Enforce Rejection Reason Modals:** Make feedback comments compulsory whenever a timesheet is rejected.
- **Enhance Real-time Bandwidth Sync:** Configure 30-second polling or window focus refetching on resource capacity views.
- **Fix UTF-8 BOM in Report Exports:** Ensure all exported CSV files include standard UTF-8 headers for Excel compatibility.
